- Import STL, OBJ or DXF from popular CAD systems - Convert 3D meshes to 2D patterns - Explode sections and invert tension of the surfaces - Export files to DXF formats Mesh Unfolder key features: - Import any STL, OBJ or DXF models from popular CAD systems - Converting 3D meshes to 2D patterns - Explode sections and invert tension of the surfaces - Export files to DXF, DWG and DGN formats - Add nodes/points, and cut/uncut holes In the last 2 years there have been an explosion in the rise of 3D printing. Due to this, there has been a significant increase in the number of makers/enthusiasts that want to have their prints exhibited and to allow others to view, compare, or buy them. There are lots of printing Web sites, including Shutterstock, that have community events to help support these people. But what about people who want to just share their creations? Or show off a cool design they have made in a small course? Those people have a few options, but very little of them have materialized. There is a new service that is aiming to fix that problem. Replant is a service dedicated to helping designers, artists, and makers create a 3D printed product. The service allows users to create their product online, or through their own web server and then 3D print the design in their choice of material, be it plastic, resin, steel or wood. They can then upload the product to either their own gallery or have it printed in their own printers. The makers and community that have created hundreds of 3D printed products will certainly find value in this service, and it is an innovative way of helping designers or other makers to share and sell their creations. But, is this service too good to be true? So we did some digging, and found some interesting statistics from a rePlant user survey that indicates the service is more than just a cool service. Of the hundreds of users that registered on the service, nearly 75% said that they would purchase a 3D print from Replant. Of course, there is a higher percent of people who have bought stuff from other services, but that is still a sizable market. We even had a happy user who has produced a couple of popular items in a timely manner, perhaps the longest one was 4 weeks. Considering this user's build of an iPhone, it was
