Since 1993, Nextel Communications has been the main provider of mobile telecommunication technology. Back then, the software company took an important step that influenced the development of cellular phones. It started working on the concept of the software-defined radio (SDR), which allowed mobile users to connect to each other over a private radio frequency and to access a public network through the same frequency. By integrating radio communications onto a mobile phone, Nextel Communications managed to provide constant coverage for the mobiles. Users no longer had to wait until they got to a different area. Instead, they could send and receive phone calls, messages and faxes while roaming. The company made further technical developments that increased phone performance, while bringing new features to the masses of users. It became mandatory for phones to have a built-in camera, two-way speakers and a microphone for sound recording. The first integrated mobile, the Motorola 7400, came out in 1993. The total number of users has now reached almost 2.5 billion people. About MyJAL MediaPal MyJAL MediaPal is a mobile media management software created for Motorola Nextel iDEN handsets.
